

Hi Team,

Please find below the updated suggestions from the Design Team for the current website layout:

- **Hero Section – Auto Display of Welcome Text**

- The “Welcome to Red Cube Solutions” section should appear automatically.
- Users should not be required to click or interact to view this content.

- **Hero Section – Card Design Alignment**

- The current card shape/design differs slightly from the approved design.
- Please revise the card layout to match the provided specifications.

- **Hero Section – Game Cards Navigation**

- Enable touch-based navigation for switching between game cards.
- Clicking on the right side of a card should move to the next card.
- Clicking on the left side should move to the previous card.
- No arrows or external navigation buttons should be used.

- **Hero Section – Progress Slider**

- The design already includes a progress slider.
- Please make it fully functional and ensure it stays in sync with the current card position and timing (approximately 10 seconds per card).

- **News Section – Card Design & Smooth Sliding**

- News cards currently differ from the approved design and should be corrected.
- Improve the smoothness of the sliding transition.

- **Interaction Difference: Hero vs News Cards**

- Hero Section: Cards should change using touch-based left/right interaction.
- News Section: Cards should be swipe-based, similar to Instagram carousels.

Please implement these changes as per the design guidelines and let us know if any clarification is required.

Best regards,
Satya
Design Team
